

CYBER & INFORMATION SECURITY

Navigating Your Security Infrastructure

About Conosco

We're the integrated partner that gives clients the leadership, experience and resilience they need to transform and embrace the future of work: business as unusual.

We pride ourselves on our technical competence and have a talented, experienced team that sees the big picture and takes a business-first approach to deliver our client's needs and aspirations. Our role is to utilise our expertise to provide businesses with the right infrastructure, technology, communications solutions and 24/7/365 support to deliver tangible value and advantage to business.

"Robust security underpins every aspect of our service. As cyber threats become more advanced and prevalent having a partner you can trust that will help you navigate the security landscape and give you the support to manage and remediate risk becomes invaluable to your business."

Hylton Stewart

Head of Security, Conosco

Our Security Services

Whatever the size of your business, Information and Cyber Security is about doing everything you can to minimise your exposure to risk, putting in place sufficient defences and instilling a security-conscious mindset. Our team delivers a broad range of services that covers every element of IT Security.

Advice and Guidance - We can help you understand the threats that your business faces and the steps you should take to mitigate risk. We can provide guidance on best practice and can develop a roadmap for securing your business.

Remedial Action - We provide an experienced team to undertake remedial work, ranging from configuration changes to your network and core systems through to selecting and deploying specific security tools and applications.

Awareness & Training - Information Security is more than just the technical solutions you have in place; it is also a mindset. As an ISO 27001 accredited company we can help you build a security-conscious culture, raising company-wide awareness and delivering highly targeted training.

Continuous Monitoring - Conosco operates a Security Operations Centre (SOC) 24 hours a day, 365 days a year. From here we are able to closely monitor your IT infrastructure using tools that enable us to detect, validate and mitigate breaches on your behalf.

We are proud to be certified for:

The Core Components of our Security Solutions

Security Operations Centre (SOC)

Cyber Security

At Conosco we believe that cyber-security is an integral part of IT and your greatest competitive advantage. It is not something that you bolt-on; rather, it is something you design into your infrastructure and applications.

Our cyber security services include: defending against external cyber attacks, protecting personal and sensitive information as it flows across your organisation, and ensuring compliance with Information Security legislation.

As one of the top cyber security companies in London, we can help you to proactively manage risk. Our advanced cyber security precautions enable us to understand where you are vulnerable, so that we can take proactive steps to help prevent and respond to threats, in order to reduce the potential risk to your business.

Our Services

Vulnerability Assessments

Virtual CISO

Managed Detection & Response

Managed SIEM

Disaster Recovery

Constant Awareness

Our clients place their trust in us to keep them secure against a threat landscape that is continually evolving and changing. We take this responsibility seriously and ensure we keep pace not only with the threats you face, but also with the solutions and best practices required to mitigate them.

Integral Part of IT

We strongly believe that security is not something you layer onto your IT environment; it is an integral part of your environment. The way you configure your network, manage user access and set password policies are all key elements of protecting your IT infrastructure, applications and data.

Security is Not 9-to-5

Unfortunately, cyber criminals do not keep office hours. As such, your security measures need to be as tight in the evenings and weekends as they are during the business day. This is why we have created a security team that operates 24 hours a day, 365 days a year.

We found Conosco to be engaging, receptive to our requirements and professional, with a wide and extensive knowledge base. Thus far their cyber security offering and risk mitigation expertise has provided us with valuable insight into our potential vulnerabilities, and we look forward to working with Conosco and building on the excellent foundations we have already established.”

Margo Landells,
Head of Enterprise Risk
Management, Pool Reinsurance

Information Security

Every employee has a role to play in protecting your business, such as knowing how to spot a potential phishing email, avoiding using weak passwords or sharing passwords, and ensuring they protect sensitive information as it flows across your organisation.

We provide Information Security Awareness training and workshops aligned explicitly to the needs of your business. This helps your people understand the potential threats to the business and the simple steps they can take to mitigate them.

We help you to assess your Information Security Risks and define the policies for controlling and processing personal and sensitive information and help you to deploy incident response measures and practices to reduce the risk of experiencing a data breach.

Vitrual Data Protection Officer (vDPO)

Training & Workshops

Assessing Risk

We start by understanding the type of information you hold and how it flows around your organisation. This enables us to assess the potential risk and the associated consequence of data loss. By doing this we are able to focus on those areas of greatest vulnerability and greatest impact.

Reducing Risk

There are many steps that can be taken to reduce risk of data loss or data breach. These range from controlling access to securing information while at rest and in transit. By understanding your IT environment, we can guide you through the appropriate options for you.

Raising Awareness

The most important element of information security is the mindset of your people. If they are aware of the risks and potential impact, they are more likely to think and act differently. We therefore focus training and workshops designed to raise awareness of your information security.

Security Certification

When customers entrust you with their personal information, they want to know that you take this responsibility seriously- that their data will be secure, will not be shared and will be deleted when you no longer have a reason to hold it.

Any organisation that stores or processes the personal information of an EU or UK citizens is required to comply with GDPR and Data Protection legislation; likewise, any organisation that takes card payments is required to comply with PCI DSS. However, smart organisations are taking further steps to reassure their customers and gain an advantage in their market through certifications such as Cyber Essentials and ISO 27001:2013.

Conosco helps organisations to comply with legislation and achieve certifications by guiding them through every step of the process.

Our Services

ISO 27001 Certification

ISO 9001 Certification

Cyber Essentials Certification

Cyber Essentials Plus Certification

ISO 27001 Certification

The ISO/IEC 27000 family of standards provides one of the globally accepted frameworks for information security best practice. The primary standard is ISO 27001:2013, which sets out the requirements for which an organisation's Information Security Management System can be audited.

ISO 9001 Certification

The ISO 9001 standard evaluates whether your quality management system is appropriate and effective for your use case. The certification process also encourages you to identify and implement improvements to your systems.

Cyber Essentials (Plus)

The Cyber Essentials scheme is a cyber security standard against which organisations can be assessed and certified. It identifies the controls that should be in place to mitigate risk from hacking, phishing, password guessing, malware and viruses, malicious employees and mistakes by unaware users.

“Conosco were instrumental in helping us achieve ISO 27001 accreditation. They carried out a thorough audit of our IT estate and gave us the guidance and support to prepare us for certification. They made what seemed like a daunting task into something much more manageable. They have helped us lay robust security foundations and continue to support our IT infrastructure.”

Rose McNeill,
Head of Strategy, Perfect Ward

Mobile Security

With an increasing number of staff working remotely, it is more important than ever that endpoints such as smart phones, tablets and laptops are protected from being compromised. In addition, it is vital that company data is protected against the broadest range of threats in real-time and without huge management overheads.

Our endpoint and network protection solutions provide our clients with comprehensive security against device, app, network and content risks.

Our Services

Unified Endpoint Management (UEM)

Endpoint Detection and Response (EDR)

Mobile Device Management (MDM)

Unified Endpoint Management (UEM)

Unified Endpoint Management refers to the central management of an organisations endpoint devices. A UEM usually includes security updates, patch management, automatic hardware and software inventory tracking, software licence management and much more.

Endpoint Detection and Response (EDR)

Endpoint Detection and Response solutions enable organisations to monitor and respond to advanced threats. They do this by monitoring endpoint and network events and recording the information for further analysis, detection, investigation, reporting and alerting.

Mobile Device Management (MDM)

Mobile Device Management Solutions allow IT administrators to control, secure and enforce policies on laptops, tablets smartphones and other endpoints. MDM will optimise the security of a businesses mobile devices and protect corporate networks.

Security Operations Centre (SOC)

No matter the size of your company, the risk of cyber and ransomware attacks is something that you should take seriously. As well as putting your data at risk, a security breach can lead to loss of earnings, reputation damage and significant downtime, all of which can be devastating to a small business.

It's best to prepare for this eventuality before it happens instead of hoping that your organisation never comes under attack, or only dealing with the problem once it arises. Adequate prevention is the best way to minimise threats to your IT infrastructure.

Our Security Operations Centre (SOC) monitors your organisation's IT environment to detect malicious activity and ensure the safety of your data and digital assets.

60%

profile individuals in
organisations**

Our SOC service provides

- 24/7/365 monitoring and management
- Managed Detection and Response (MDR)
- SIEM monitoring of infrastructure and cloud services
- Vulnerability assessment and management
- Security audits and health checks
- Regular updates, intelligence sharing and reporting
- Advice for prevention, containment and resolution of risks
- Compliance support, such as FCA regulations, GDPR, PCI DSS and ISO 27001
- Cyber Essentials Service
- Staff security awareness training and phishing simulations

The Conosco Advantage

Our goal is to deliver IT security that is focused on your business needs, proportionate to the risks you face and aligned to the way that you work.

As an end-to-end IT Services provider, we are ideally positioned to make security an integral part of your IT infrastructure and provide a seamless means of managing your IT estate. We do not merely look to plug the gaps with security applications, but to make security a central part of how you provision, configure and control access to core infrastructure, applications and data.

You will find us pragmatic, open and challenging in a positive way. We live and breathe IT and IT Security and are missioned to help you to protect your business now and in the future.
