# Managed Computing Plus
## Security Essentials

"We found Conosco to be engaging, receptive to our requirements and professional, with a wide and extensive knowledge base. Thus far their cyber security offering and risk mitigation expertise has provided us with valuable insight into our potential vulnerabilities, and we look forward to working with Conosco and building on the excellent foundations we have already established."

## Proactive cyber security to help guard your business against threats

### What is Managed Computing Plus (MC+)?

The present-day security landscape requires organisations to take additional measures to protect and monitor their infrastructures. MC+ is an add-on to the existing MC service for devices. It includes a selection of security-related services designed to give clients entry-level access to Conosco's Security Operations Centre (SOC) as well as some of the tooling we use to protect our clients IT assets. The components of MC+ have been designed to assist clients in meeting the baseline requirements of standards such as Cyber Essentials as well as industry best practice for security.

### Key Features

- SOC services
- Vulnerability scanning
- Monitoring & alerting
- Network security
- Cyber advisory service
- QBR reporting

## Security Operations Centre (SOC)

Our Security Operations Centre (SOC) monitors your organisation's IT environment to detect malicious activity and ensure the safety of your data and digital assets. For MC+ clients this includes:

- Email reputation security monitoring and incident investigation
- Cloud service alerting for Microsoft 365, Google Workplace and other supported cloud services

- Quarterly checks for MFA enabled Global Admin rights
- Identity source auditing
- Quarterly configuration review for firewalls and routers
- Anti-malware and infection alerting (for Windows)

## Network Security Tools

- Monthly third party vulnerability patch management
- Supported third party applications on managed devices
- OS patches and/or packages deployed to relevant machines
- Credential breach dark web monitoring for critical email accounts and external IP addresses

## Cyber Advisory Service

Our highly skilled SOC Team will proactively monitor your environment and help you  respond to incidences. We'll also be available by email or phone to address basic cyber security queries.
